Abstract

With the rapid advancement of multimedia technologies and the Internet, multimedia information can be easily created, shared and distributed, using not only computers, but also numerous other portable digital devices. As multimedia information has become fully ubiquitous in our lives, searching for multimedia data objects has thus become an important activity. It is certainly notable to be able to find a solution for searching multimedia information effectively and efficiently. However, this type of search is far more difficult than searching text-based documents since the inherent high-level semantic image features and concepts require a degree of intelligent judgement that cannot be mechanised or automated. Furthermore, the most challenging problem facing the semantic search of multimedia data objects is the ability to index them.

Here, we present an innovative approach that enables the semantic search of multimedia data object by the discovery and meaningful indexing of their semantic concepts. Such objects may include images, videos and different music or audio formats. The basic framework of our indexing approach is to capture human judgement from user search queries in order to build semantic indexes which relate search terms to the semantics of multimedia objects while maximising user
This approach is particularly effective for the retrieval of multimedia objects, such as images and audio and video data, where a direct analysis of the object features does not allow them to be related to search terms, e.g. non-textual/icon-based search, deep semantic search or when search terms are unknown at the time the multimedia repository was built.

By analysing the users' search queries, relevance feedback and selection patterns, semantic concepts can be discovered and migrated through an index hierarchy. Through the growth and evolution of the index hierarchy, the semantic index may be dynamically constructed, validated and augmented. Our system also incorporates a high degree of robustness and fault tolerance. We also incorporate genetic variations into the design to allow objects which may otherwise be hidden to be discovered. The index convergence behaviour and its modelling are examined. Experimental results indicate that the present approach is able to confer significant performance benefits in the semantic searching and discovery of a wide variety of multimedia data objects.

Table of Contents v

List of Figures xii

List of Tables xv

Chapter 1 Introduction 1

1.1 Semantic Indexing 2

1.2 Collaborative Approach 3

1.2.1 Collaborative Filtering And Recommendation Systems 4
Chapter 2 Literature Review

2.1 Background on Information Retrieval (IR) ............................ 10

2.2 Multimedia Information Representations .............................. 13

2.2.1 Acquisition And Digitisation ........................................ 13

2.2.2 Image Representation .................................................. 14

2.2.3 Audio Representation .................................................. 15

2.2.4 Video Representation .................................................. 16

2.3 Current Multimedia Information Retrieval (MIR) .................... 18

2.3.1 Image Retrieval ....................................................... 18

2.3.2 Music Retrieval ........................................................ 19

2.3.3 Video Retrieval ....................................................... 20

2.3.4 Collaborative Information Retrieval ............................... 21

2.3.5 Challenges in Multimedia Information Retrieval ................. 22
Chapter 3  Collaborative Evolutionary Indexing

3.1  Multimedia Indexing

3.1.1  Index Basic Element And Hierarchical Structure

3.1.2  Index Score Update Algorithms

3.1.2.1  Incrementing the Score

3.1.2.2  Decrementing the Score

3.1.3  Minimal Indexing And Maximal Indexing

3.1.3.1  Minimal Indexing

3.1.3.2  Maximal Indexing

3.1.3.3  Probability of Object Recovery

3.1.4  Index Growth And Evolution

3.1.4.1  Augmentation of an Existing Index Term

3.1.4.2  Addition of an Existing Index Term

3.1.4.3  An Example for Installing New Index Terms

3.1.4.4  Attaining Intelligence through Index Evolution

3.2  Influence of User Relevance Feedback
3.2.1  Explicit User Feedback - User Vote .................. 47

3.2.2  Implicit User Feedback - User Selection ............. 48

3.2.2.1  User Click Model .............................. 49

3.2.3  An Example of Index Evolution Workflow Affected by User Relevance Feedback ..................... 51

3.3  Ranking Approach ....................................... 53

3.3.1  Naïve Strategy ..................................... 53

3.3.2  Randomised Strategy with Genetic Algorithms ....... 54

3.3.3  Elitism ................................................ 58

3.4  Modelling Index Convergence Behaviour ................ 59

3.4.1  Index Convergence Behaviour ......................... 59

3.4.2  Epidemic Models ................................. 63

3.5  Collective Wisdom Indexing for Advanced Multimedia Semantics ......................... 65

3.6  Summary ................................................. 66

Chapter 4  Evolutionary Adaptive Search Engine .......... 68

4.1  Index Architecture Overview ............................. 70

4.2  Evolutionary Self-Organising Search Engine .......... 71
4.2.1 Static Search Engine .................................. 71
4.2.2 User Feedback ....................................... 74
4.2.3 Adaptive Search Engine .............................. 75
4.3 Adaptive Search Engine Architecture ................... 75
4.4 Query Processing ........................................ 76
  4.4.1 Naïve Greedy Strategy ............................... 78
  4.4.2 Randomised Strategy ................................. 79
    4.4.2.1 Randomised Query Processing ................. 80
  4.4.3 Coverage and Mutation ............................. 81
  4.4.4 Dynamic Elitism .................................. 82
4.5 Feedback Processing ..................................... 84
  4.5.1 Positive Feedback .................................. 85
  4.5.2 Negative Feedback ................................ 85
  4.5.3 Increment/Decrement values ........................ 86
4.6 Introducing New Terms and New Objects ................. 86
  4.6.1 Object Insertion .................................. 86
  4.6.2 Term Insertion ..................................... 87
Chapter 5  Experiments And Evaluations  

5.1 Measuring Indexing Performance  

5.2 Evaluations  

5.2.1 Recall And Precision  

5.2.2 Global Feedback And Performance Evaluation  

5.3 Experiments I: Index Growth And The Effect of Indexing  

5.4 Experiments II: Index Convergence  

5.4.1 The Robustness of Index Convergence  

5.4.2 Decay Behaviour of Number of Remaining Index Terms And Index Convergence  

5.4.3 Behaviour of Index Convergence Models And Epidemic Models  

5.5 Experiments III: Convergence of Collective Adaptive Search Engine  

5.5.1 User Model  

5.5.1.1 Relevance Distribution Models  

5.5.1.2 Feedback Model
5.5.1.3 Query Model ........................................... 114

5.5.2 Parameters Tuning ....................................... 114

5.5.3 Scalability and Queries/Objects Ratio ................. 116

5.5.4 Static And Dynamic Elitism ............................ 118

5.6 Summary ..................................................... 124

Chapter 6 Conclusions And Future Works .................. 125

6.1 Our Contributions .......................................... 125

6.2 Future Works ................................................ 128

6.2.1 Discover Similarity And Dissimilarity Among Multimedia Data Objects .............................. 128

6.2.2 Validation on User Relevance Feedback ............. 128

Appendices ......................................................... 150

Chapter A System Interface .................................. 150

Chapter B Publication List .................................... 152

Curriculum Vitae ................................................ 154
