Abstract

IL-8 is strongly expressed in the tissues of nasopharyngeal carcinoma (NPC). The IL-8 expression has been found to contribute to cell growth and metastasis by binding to its receptors CXCR1 and CXCR2. However, the expression of IL-8 and its receptors in the growth and development in NPC has not been fully studied. In the present study, the role of IL-8 in NPC was examined. All the poorly differentiated NPC cell lines, including the EBV-positive C666-1, and the EBV-negative CNE-1, CNE-2, SUNE-1, HNE-1 and HONE-1, were found to express IL-8 and CXCR1. The expression of CXCR2 was only found in the C666-1 and CNE-1 cell lines. As EBV infection is closely associated with the development of NPC, therefore, C666-1 was selected to examine for the role of IL-8 in the growth and migration of NPC cells. Both the cell growth and migration were inhibited by the IL-8 peptide inhibitor and also the PI3K inhibitor LY294002. This observation indicated that IL-8 could promote cell growth and migration through the Akt signaling pathway. As the expression of the CXCR2 was over 300-fold higher than CXCR1, the role of CXCR2 was first evaluated and CXCR2 was found to effectively suppress the growth of C666-1.
After evaluating the role of IL-8 in C666-1 cells, the regulations of IL-8 expression were also studied. mRNA expression of IL-8 could be downregulated by the NFκB inhibitor parthenolide or MIF-knockdown. In addition, the inhibition of MIF expression was also found to significantly correlate with the decrease in the size of tumour spheres. Expression of the potential cancer stem cell markers, CD44 and Sox2 by the tumour spheres after MIF-knockdown was greatly decreased. Results from this study suggested that MIF could be a novel therapeutic target in the treatment of NPC.

Table of Contents v
List of Tables x
List of Figures xi
List of Abbreviations xiii

Chapter 1 Introduction 1

1.1 Overview of Nasopharyngeal carcinoma (NPC) 1
   1.1.1 Epidemiology of NPC 1
   1.1.2 Types of NPC 2
   1.1.3 Etiology of NPC 3
   1.1.4 Involvements of Epstein-Barr virus (EBV) in NPC 6 development
   1.1.5 Treatments of NPC 7

1.2 Chemokines 9
   1.2.1 Classification of chemokines 9
   1.2.2 General features of chemokines 10
   1.2.3 Regulation of chemokines expression 11
   1.2.4 Role of chemokines in tumor microenviroment 12

1.3 Chemokine signaling as a cancer therapeutic target 14
   1.3.1 Using chemokines for therapy 14
   1.3.2 Therapeutic targeting of chemokines 15
   1.3.3 Therapeutic targeting of chemokine receptors 17
## Chapter 2 Materials and Methods

2.1 Materials for Cell culture
   - 2.1.1 Culture media
   - 2.1.2 Completion of media
   - 2.1.3 Buffers and solutions

2.2 Chemicals

2.3 Reagents for polymerase chain reaction (PCR)
   - 2.3.1 Reagents for preparation cDNA
   - 2.3.2 Reagents for PCR
   - 2.3.3 Reagents for DNA gel electrophoresis

2.4 Reagents for real-time PCR

2.5 Reagents for Enzyme-linked immunosorbent assay (ELISA)

2.6 Reagents for cell migration assay

2.7 Reagents for spheroid formation assay

2.8 Reagents and buffers for Western blotting
   - 2.8.1 Buffers for the preparation of protein samples
   - 2.8.2 Reagents for the preparation of stacking gel and resolving gel
   - 2.8.3 Reagents for Gel Electrophoresis
   - 2.8.4 Reagents for immunoblotting
   - 2.8.5 Washing buffer
   - 2.8.6 Blocking buffer
   - 2.8.7 Antibody diluting buffer and Antibodies
   - 2.8.8 Reagents for image development

2.9 Reagents for transient transfection with siRNA

2.10 Reagents for immunofluorescence staining

2.11 Cultivation of NPC and immortalized NP cell lines
2.12 PCR

2.12.1 cDNA samples preparation

2.12.1.1 RNA extraction

2.12.1.2 Reverse transcription

2.12.2 Polymerase chain reaction

2.12.3 DNA gel electrophoresis

2.13 Real-time PCR

2.14 Enzyme-linked immunosorbent assay (ELISA)

2.15 Migration

2.16 Hanging drop Assay

2.17 Spheroid formation Assay

2.18 Western blot

2.18.1 Protein Extraction

2.18.2 Determination of protein concentration

2.18.3 Preparation of protein samples

2.18.4 Gel electrophoresis

2.18.5 Preparation of Membrane and transfer sandwich

2.18.6 Immunobloting

2.18.7 Image development

2.19 Transient transfection with siRNA

2.20 Immunofluorescence staining

2.21 Statistical analysis

Chapter 3 Effects of IL-8 on the migration and growth of NPC cells

3.1 Introduction

3.2 Results

3.2.1 Expression of IL-8, CXCR1, and CXCR2 mRNA in
NPC cell lines

3.2.2 Secretion of IL-8 by C666-1 cells

3.2.3 Effect of exogenously added IL-8 on the migration of C666-1 cells

3.2.4 Effect of exogenously added IL-8 on the growth of C666-1 cells

3.2.5 Exogenously added IL-8 stimulates the expression of p-Akt

3.2.6 Effect of IL-8 peptide inhibitor on the migration of C666-1 cells

3.2.7 Effect of IL-8 peptide inhibitor on the cell growth of C666-1 cells

3.2.8 Inhibition of the expressions of p-Akt by IL-8 peptide inhibitor

3.2.9 Effect of the PI3K inhibitor LY294002 on the migration of C666-1 cells

3.2.10 Effect of the PI3K inhibitor LY294002 on the growth of C666-1 cells

3.2.11 Effect of CXCR2 inhibitor SB225002 on the growth of C666-1 cells

3.2.12 Effect of CXCR2 inhibitor SB225002 on the expression of p-Akt

3.3 Discussion

Chapter 4 Mechanisms of IL-8-mediated growth of the NPC cells

4.1 Introduction

4.2 Results

4.2.1 Effect of Snail siRNA treatment on the expression of IL-8 mRNA

4.2.2 Effect of NFκB inhibitor parthenolide on the expression of IL-8 mRNA

4.2.3 Expression of MIF and CD74 mRNA in NPC cell lines

4.2.4 Expression of IL-8 mRNA is reduced in MIF siRNA treated
4.2.5 Reduction of tumour spheres formation by MIF siRNA treated C666-1 cells

4.2.6 The expression of CD44 and Sox2 by tumour spheres after MIF siRNA treatment

4.2.7 Effect of CD74 siRNA treatment on the formation of tumour spheres

4.3 Discussion

Chapter 5 Conclusion and Future Perspectives

5.1 Conclusion

5.2 Future Perspectives
